

8. (Currently amended) An integrated A power source unit for a telecommunications device comprising;

a housing adapted to be received by a telecommunications device, the telecommunications device including a substantially parallelepiped housing having a front face, a back face, a first and a second side face, a top end face and a bottom end face;

a lens located in the wall of the housing in a location wherein when the housing is received by the telecommunications device, the lens is positioned within the bottom end face;

a source of illumination located within the housing and positioned to project a beam of light through the lens to illuminate an area surrounding the telecommunications device with sufficient candlepower to enable a user to view the area; and

a power source for the source of illumination in electrical communication with the source of illumination;

~~wherein the power source unit may be used to power communication devices and other portable devices and may be used interchangeably with said devices.~~

9. (Once amended) The power source unit of claim 8 further comprising a switch in electrical communication with the power source and the source of illumination.

10. (Originally Filed) The power source unit of claim 8 wherein the source of illumination is an incandescent light bulb.

11. (Originally Filed) The power source unit of claim 8 wherein the source of illumination is an light emitting diode.
